

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Canceled)
2. (Canceled)
3. (Currently Amended) The container according to ~~claim 1~~claim 10, wherein ~~said the~~ container is molded from a resin in the amount of about 6g, when ~~said the~~ container has a volume of about 560ml.
4. (Currently Amended) The container according to ~~claim 1~~claim 10, wherein ~~said the~~ synthetic resin is polypropylene.
5. (Currently Amended) The container according to ~~claim 2~~claim 10, wherein the bottom face region connects the sidewall to the rising region and is in the shape of ~~an inverted~~a reverse R.
- 6-9. (Canceled)
10. (Currently Amended) A synthetic resin thin-walled bottle container ~~comprising comprising:~~
_____ a mouth portion for filling or discharging ~~contents, contents;~~
_____ a body portion extending from the mouth ~~portion, portion;~~ and
_____ a heel portion provided at a bottom part of the body portion, for placing therein the body portion in a self-supporting manner, ~~characterized in that said the~~ heel portion ~~comprises comprising:~~
_____ a sidewall having a curved surface that is recessed toward the inside of ~~said the~~ container;

_____ a bottom face region formed of a curved surface that is smoothly continuous with ~~said~~ the curved surface of the sidewall and bulged toward the outside of ~~said~~ the container;

_____ a bottom-up region formed of a curved surface recessed inwardly toward the vicinity of the ~~bottle~~ center axis of the bottle; and

_____ a rising region between ~~said~~ the bottom face region and ~~said~~ the bottom-up region, for continuously and smoothly connecting ~~said~~ the curved surface of the bottom face region and ~~said~~ the curved surface of the bottom-up region to each ~~other~~ other;

wherein the bottom face region and the rising region are bulged toward the underside of the container when the container is filled with the contents, and the bottom face region and the rising region form a flat surface that is closely contacted with a supporting surface of the container.

11. (Currently Amended) The container according to claim 10, wherein ~~said~~ the body portion further comprises a reinforcing portion adjacent ~~said~~ to the mouth portion.

12. (Currently Amended) The container according to claim 11, wherein ~~said~~ the reinforcing portion is formed in a diamond-cut pattern.

13. (Previously Presented) The container according to claim 10, wherein the body portion further comprises a gripping recess.

14. (Previously Presented) The container according to claim 10, wherein the curved surface of the sidewall has a first radius of curvature and the curved surface of the bottom face region has a second radius of curvature, which is less than the first radius of curvature.
